ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.*

(54) Title: USE OF MURINE GENOMIC REGIONS IDENTIFIED TO BE INVOLVED IN TUMOR DEVELOPMENT FOR THE DEVELOPMENT OF ANTI-CANCER DRUGS AND DIAGNOSIS OF CANCER

(57) Abstract: The present invention relates to murine genomic regions, identified by retroviral insertional tagging of mice as being involved in tumor development, in particular leukemia development, as well as human homologues thereof, and to the use of these ge-
nomic regions for the identification and development of anti-cancer drugs, such as small molecule inhibitors, antibodies, ribozymes,
antisense molecules and RNA interference (RNAi) molecules, that are effective in reducing or eliminating the tumorigenic effects
of genetic transformations in these genomic regions and/or eliminating the tumorigenic effects of expression products thereof. The
invention further relates to these anti-cancer drugs and to their use as pharmaceutical reagents for the treatment of cancer, as well as
to pharmaceutical compositions comprising one or more of said pharmaceutical reagents and to methods for the treatment of cancer
using said pharmaceutical compositions, in particular to methods of gene therapy. In yet further aspects, the invention relates to nu-
cleic acids, to antibodies capable of binding specifically to murine genomic regions and to expression products thereof, to the use of
said nucleic acids or antibodies as diagnostic reagents for the diagnosis of cancer, as well as to diagnostic compositions comprising
one or more of said diagnostic reagents and to methods for the diagnosis of cancer using said diagnostic compositions.
